Susan watched TV until 12 a.m. last night. Her mother ordered her to go to sleep, but she said that sleeping wasted her time. Then her mother told her a story. Read the story and complete the task.

No Sleep

Have you ever heard that some animals and insects do not need any sleep? Butterflies, flies, and golden fish are examples of species which do not sleep every day. At times we see them being stationary, but this does not mean that they are sleeping. Their body temperatures decrease, and as a result they can not move. Is it surprising?

What about us? Do you think that we can survive without any sleep? One woman in England broke the world record by not sleep for eighteen days and seventeen hours. According to doctor advice, people, in fact, will die if they do not sleep for more than five days. If we do not get enough sleep, we will feel tired and dizzy. In addition, our health will deteriorate. However, many children like playing computer games and watching TV until late at night. When they go to school, they are very sleepy and do not have enough energy to pay attention to the teacher in classes. Adequate sleep is very important for us. Children, please be smart and go to bed early from now on.
Hi Children! After reading the story, please help Susan to finish the crossword puzzle given by her mother. It is very interesting!

Cross
1. They are insects which do not need any sleep and love flowers.
